

🔗 From Restarting My Journey... to Building a 3D Responsive Calculator!

A few months ago, I started learning HTML & CSS.

But like many beginners, I got stuck, lost consistency, and stopped learning for a while.

Recently, I decided to start again from scratch — revise the basics and rebuild my confidence step by step. And today, I'm really proud to share one of my first polished projects:

- 🔖 A clean, white, 3D-style, responsive Calculator UI
- 🔖 Built using only HTML, CSS, and JavaScript
- 🔖 With proper logic for AC, DEL, %, operators, and result handling
- 🔖 And a clear roadmap for future improvements

What I learned during this project:

- ◇ How to handle UI design from scratch
- ◇ How JavaScript event listeners work
- ◇ How to build real logic step-by-step
- ◇ How to improve code instead of restarting every time
- ◇ How to stay consistent and trust the process

What I will improve next:

- ◇ Keyboard support
- ◇ History panel
- ◇ Dark/Light mode
- ◇ Preventing double operators
- ◇ More polished UI animations
- ◇ Cleaner code architecture

Every line of code taught me something.

This project might be small — but for me, it represents growth, patience, and not giving up.
